**Poster Session for the March 2007 Annual Meeting of the Association of American Geographers**

**NSF GK-12 Programs in Geography and Geosciences**

Organized by Jon Harbor, Purdue University and UCDHCS, and Sally Horn, The University of Tennessee

Co-sponsored by the Education, Geomorphology, and Biogeography Specialty Groups

**Description of Poster Session:**

Graduate students, faculty, and teachers will present on NSF-funded projects that pair graduate fellows with K-12 teachers to enhance instruction in geography and the geosciences. Several current GK-12 projects involve graduate students and faculty with research interests in biogeography and geomorphology who are sharing and conducting research in these areas with K-12 students and teachers. Other projects have strong emphases on remote sensing, GIS, and spatial learning. If you are now or were part of a GK-12 project (with any thematic focus), we welcome your participation. Posters can focus on project activities as well as learning outcomes research associated with these activities. The session is intended to showcase what GK-12 projects are doing, and what we are learning from these projects, as well as to help others interested in applying for NSF GK-12 funding to understand how geographers and geoscientists have developed and run these programs.
